Acknowledgement

This Project is our cordial effort and our supervisor's initiative and constant motivation. But First of all, we would like to be grateful to the Almighty Allah, who gives us the effort to work on this project for the last one semester. Specially thanks goes to our honorable supervisor M. Mahmudul Hasan faculty member, American International University-Bangladesh [AIUB] for this enormous support, inspiration, and helpful criticism. His excellent supervision and constant support makes this project possible. We are very grateful to him for giving us the opportunity to work with him. We also convey our thanks to our honorable Vice Chancellor, Dr. Carmen Z. Lamagna, our Dean, Prof. Dr. Tafazzal Hossain, our Associate Dean, Mashour Rahman, our Director, Dr. Dip Nandi, and our Head of Department, Dr. Mahbul Syeed for their constant motivation and support.

Last but not least we thank our respectable parents for educating us with aspect from both arts and sciences, for their unconditional support and encouragement to pursue our interests, even when interests went out of boundary.

PROJECT SUMMARY

Tech Gear is an e-commerce application by which computer products and accessories can be purchased and sold. This has a simple user interface with traditional features and some extra features like category wise search, video review, compare products with different category, question & answer. The system supports almost all types of payment method available in Bangladesh. Products can be shipped all over Bangladesh. The system has three types of user those are guest user, registered user, and admin. The guest user can use some basic functionalities like see all products, filter products, compare product, see product details, add product to cart, ask question, see related product, see question answer, video review, and registration. If the guest user wants to place an order, then s/he must need a registration. The registered use only can rate and review of delivered products. They can keep track of order and see the order history. Only a registered user can use the wish-list feature. Admin can add user, add category, enable or disable category, add new products, add data to SCS, delete data of SCS, delete data of category, track orders and change order status, see questions and give reply, also delete a user.

- E-Commerce Application
- Online Shopping
- Computer Accessories
- Product Comparison
- Review Products

Chapter 1

PROJECT INITIATION

1.1 Background to the problem

Money is valuable. But time is more valuable than money. Now in these busy days, people cannot afford enough time to go to the physical shop for purchasing products. People like to purchase products sitting at home. But in Bangladesh, people got frustrated when they visit an online shopping site to purchase a product. They face problems regarding lack of user-friendly web design or transaction issue as well as the quality of the products delivered to them. To solve these problems, we decided to develop a user-friendly, secure transaction provider and high-quality product supplier e-commerce system.

1.2 Objective of this project

The Tech Gear sells different types of computer products to customer living in any part of the country. The website will show all products in categorized manner. Customers can browse any product for its price and other details and can order the product. Products can be managed by admin panel. Admin can keep track of orders through admin panel. These are the common features of most e-commerce sites. We have some extra features like ‘video review’, ‘category wise searching’, ‘compare products with different category’, ‘question & answer about product’. But the main purpose of the system is to enable customers to browse and order from any part of the country and hence increasing business scope.

1.3 Literature Review of Existing studies

There are already some e-commerce services running in Bangladesh. They are now providing various kind of services to the customers. But their services have some issues like

- Take much time to load e-commerce website for its bulky design
- The database is not strong enough
- Searching methods are not that much effective
- Based on only Dhaka city
- Unattractive design and poor creativity in it
- Lack of understanding the customers of Bangladesh

So, there are some chances to overcome the issues and opportunities to get more people to get involved into our e-commerce system.

Chapter 2

ELICITATION

2.1 Product Perspective

Tech-Gear is a new and self-contained product. Tech-Gear is aimed to reach the maximum numbers of customers and common people who can be potential users to us. The project ensures the bridging the gaps between us and customers. Tech Gear is a user friendly and 'easy to learn' system for this purpose. Tech Gear is a standalone product and requires only third-party payment service like 'sslcommerz'. It should be run on the UNIX and windows-based platform. This system makes the whole shopping system a lot more easier and time saving in our busy life. The customers can choose and pay online or cash on delivery if the product is available.

2.2 User Classes and Characteristics

The users of the Tech Gear system are simply anyone who have access to the Internet and a web browser. It is assumed that the users are familiar enough to use the internet through any of the web browser.

The users are categorized in three different types:

1. Guest users
2. Registered users
3. Admin users

Guest users can visit the web portal and see the products. The registered users can buy and make the payment. They are also eligible to see the shipment. Admin is the person who manage the system. Admin can add, delete, edit users as well as the products list. Admin can see sells report, orders and much more.

2.3 Operating Environment

The resources required from the Server Side are:

OS: Linux/Windows Server
CPU: Xenon E7
RAM: 40 GB or Higher
Storage: 20 TB or More

The resources required from the Client Side are:

OS: Any operating system with web page browsing accessibility
CPU: Intel Pentium or Higher
RAM: 512 MB or Higher

2.4 Design and Implementation Constraints

Most of the projects have some design and implementation constraints. We also have some constraints. We decided to use 'sslcommerz' (a third-party payment service) for online payment process. But as the 'sslcommerz' needs trade license and a business bank account for registering an account, so we cannot register an account and cannot include the actual payment process to our system.

This system is provisioned to be built on the Laravel framework which is highly flexible. Decision regarding which database to use is taken considering the fact that data being exchanged or stored is large and the appropriate data management system will yield efficient performance. Security is not a concern for this system. The database may save the passwords in plain text. The system may not work correctly where security is an issue. Real life credit card feature is not supported in this system. Multilingual service is not added in this system and language is only English.

Chapter 3

REQUIREMENT SPECIFICATION

3.1 User Story

The user story has been written according to the guideline by Easy Agile (2019) & Mountain Goat Software (2019).

User Stories	Acceptance Criteria
As a user, I want to get signed up and login.	Registration Login
As a customer, I want to see product list	See images of items Select products to purchase View details Add to cart the product Search for an item View items by filter
As a customer, I want to review my cart and edit	View quantities View total cost Remove or add items
As a customer, I want to login and get the item shifted to me	See total with shipping Enter shipping address Get confirmation text Logout
As a customer, I want to see previous order history	View the order list View order information

As an admin, I want to modify the products list	Add or remove items Modify item image Modify a category
As an admin, I want to see order list and sales report	See order list See sales report
As an admin, I want to see and modify customer details	See customer details Edit customer details

3.2 Business Requirement

Tech Gear system will be working as a bridge between the customers and the seller. It will help the seller to operate with the vast number of distant users. This system will make shopping a lot easier. People will be more interested to buy different products and they will get to know about a lot of more different products that the companies offer. The vendor always expects to communicate with its customers. This system will fulfill this need and build a strong business communication system between the customers and the seller. This opportunity will reflect on the economy of the overall retails business.

3.3 System Requirements Functionalities

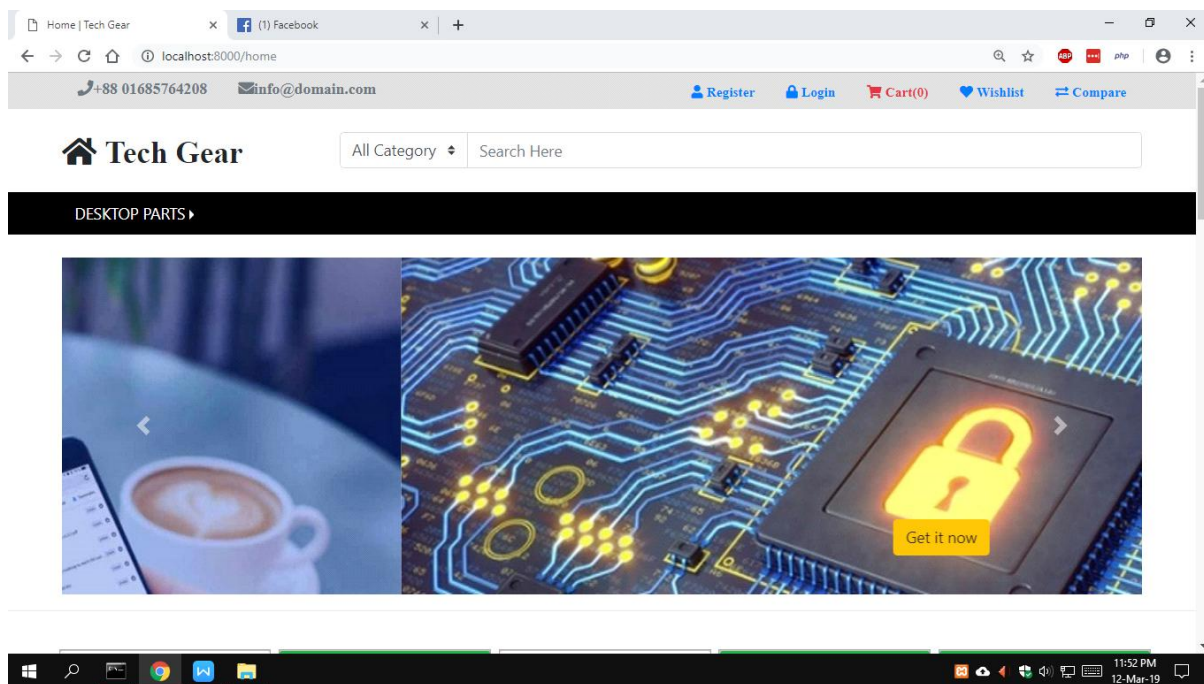

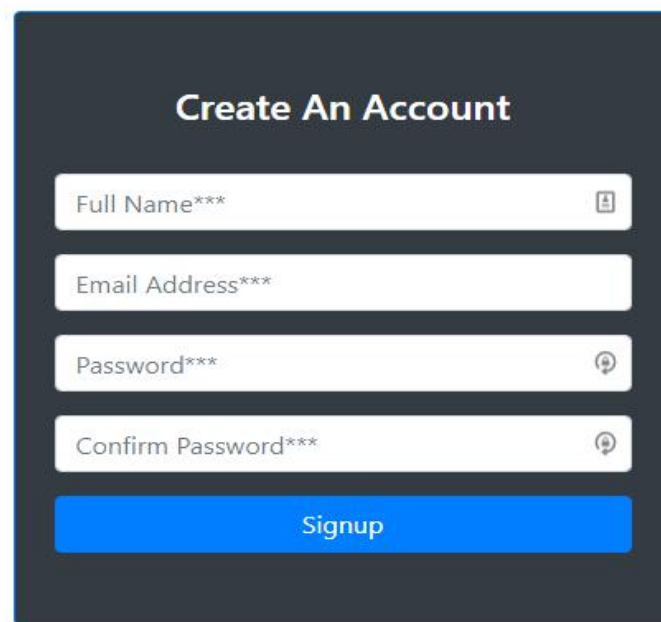

Figure 1: The Home Page

Users can land to this page and get themselves started. They can login to the system with their email and password after the registration. Users can see the slider, collection, static. Existing item can be linked the slider. Users can search for different products and filter the products by properties. Users can also compare between products. Users can keep the track of items they have inserted in add to cart list.

Functionalities of Guest Users

The registration form is titled "Create An Account" and is set against a dark blue background. It contains four input fields: "Full Name***", "Email Address***", "Password***", and "Confirm Password***". Each field has a small icon on the right (a person for name, an envelope for email, and a key for passwords). Below the fields is a prominent blue button labeled "Signup".

Figure 2: Registration

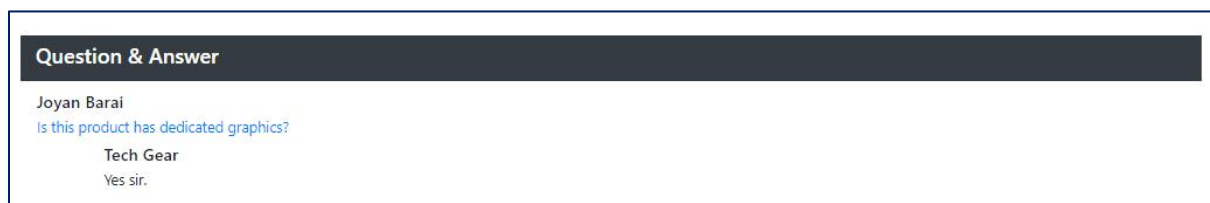

First of all, the guest users can get themselves registered to become a registered user. There are 4 fields. Full Name, Email Address, Password, Confirm Password. All of the fields must be filled up to create an account. The length of Password must be 5-15. Password and Confirm Password must match.

The search interface features a dropdown menu on the left with the following options: "All Category", "Desktop Parts", "Processor", and "Ram". The "Processor" option is currently selected and highlighted in blue. To the right of the dropdown is a search bar with the placeholder text "Search Here".

Figure 3: Search

They can search for the desired items category-wise. Select field can have 3 types of categories. All Category, Parent Category & Child Category. Here Parent Category is Desktop Parts and Child Categories are Processor, Ram. The search program starts search when the length of Search field will be greater than 2.

The "Question & Answer" section has a dark header. Below it, a question is displayed: "Is this product has dedicated graphics?" by user "Joyan Barai". The question is in blue text. Below the question, the answer is shown: "Yes sir." by "Tech Gear".

Figure 4: Question & Answer

They can also ask anything about the product. Tech Gear Admin will answer them all. The question will not be shown, if Tech Gear Admin deletes the question or doesn't answer.

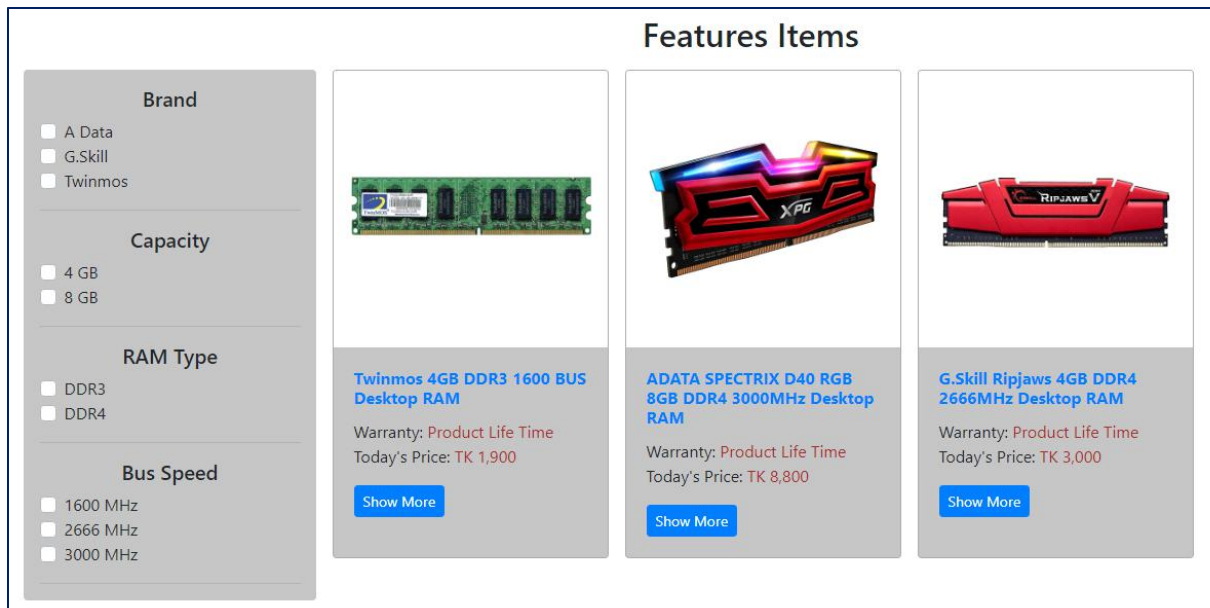

Figure 5: Product List with Filters

They can see the product list and filter properties. The filter properties are assigned by admin in the time of creating category. Here the filter properties are Brand, Capacity, RAM Type, Bus Speed. The values of each property come from the specifications of products. User will click on the title or 'Show More' to see the details of a products or to perform any action regarding a product like Add To cart, Add To Compare, Add to Wishlist.

Figure 6: Product Details

They can see the product details. They can add product into cart or compare. But if they click on 'Add to Wishlist', then a login page will be shown. After a successful login, an user will be able to add product into wishlist. Some highlighted properties like 'Model', 'Warranty' and the 'Price' are shown. To see the full specifications, a silly scroll is needed.

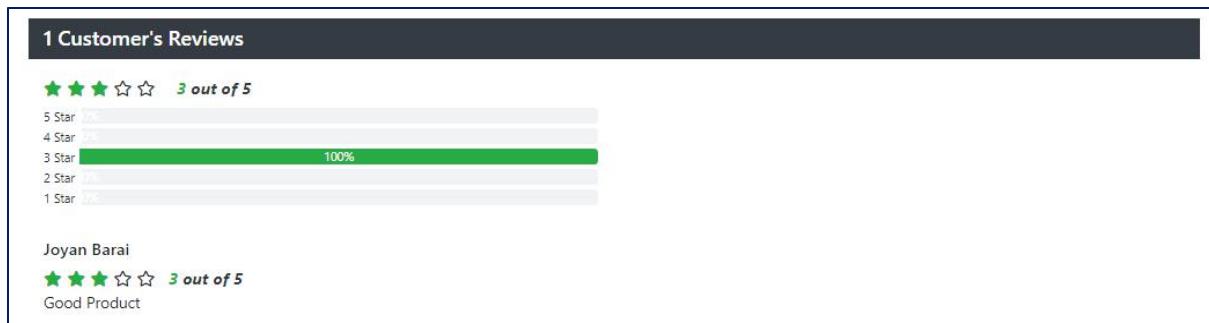

Figure 7: Product Rating & Review

A product has an overall rating and also individual user's rating and comment. The rating is denoted by stars. 5 stars are used for rating. The number of stars filled with green color is the rating value. There are also individuals percentage for the stars. The percentage of each star indicates the number of rating provider out of 100.

Figure 8: Video Review

Users can view the video review of the products they are about to buy. This will give them a better idea about the product. The admin add a video link in the time of adding a product. But in further the link can be changed by the admin. This is not mandatory to add a link when a product to be added.

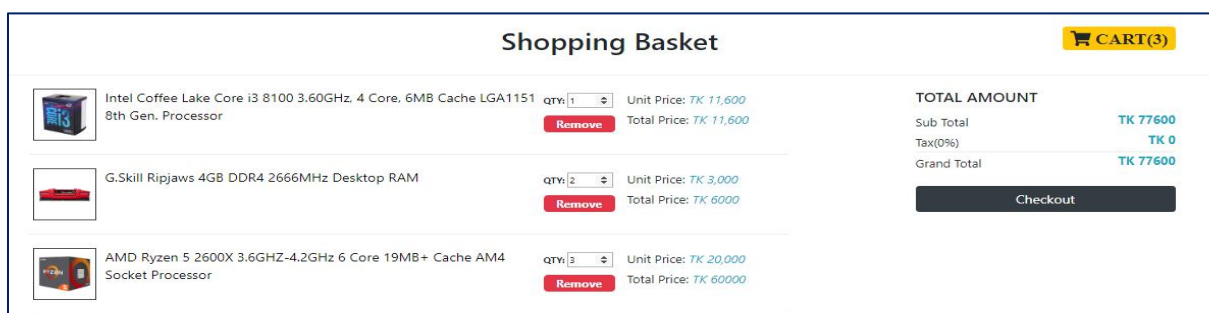

Figure 9: Shopping Cart

Last of all they can add items into cart, modify quantity, remove products from cart. But guest users can not place order without login into an account. The total amount with tax is shown at the right side of Shopping Basket page. The cart will be automatically destroyed at the time of closing the browser.

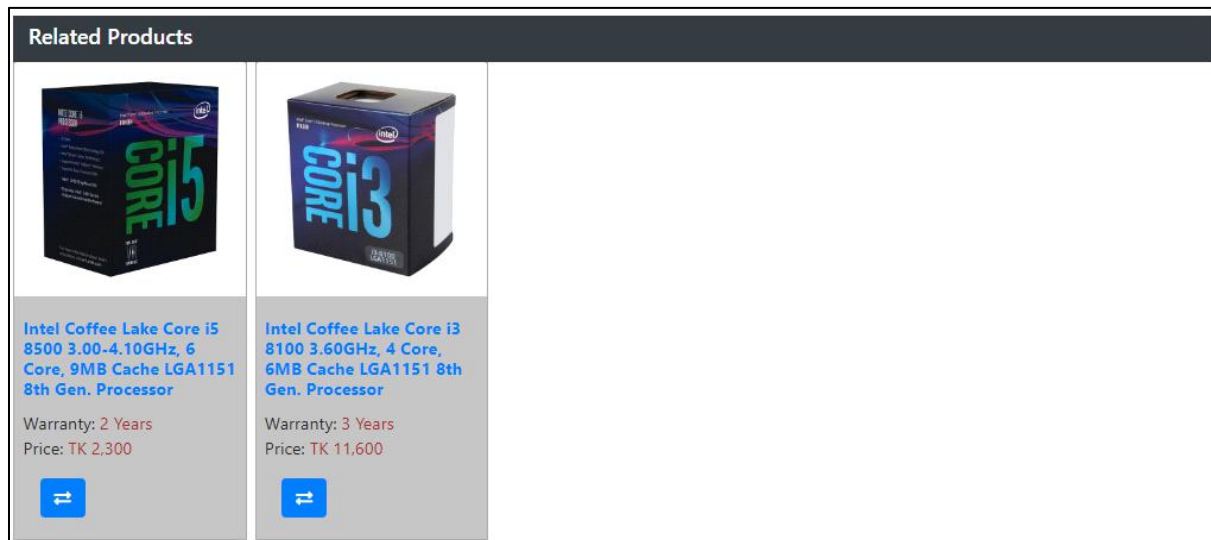

Figure 10: Related Products

They can also see the products suggestion. When they see the details of a product, then the related products section is found at the bottom of the page. The related product are shown on the basis of the current product. Maximum 10 products are suggested for a product. Guest user can also add these related products into compare section directly.

Figure 11: Compare Products

The user can use the most important feature comparing the items. This feature helps the best to choose one item. Guest users can use this feature. Products of different categories can be compared. At max 4 items can be added into compare. The user can add a product to cart directly from here. If they want to remove a product from compare, then just click on remove. The products of compare will be automatically removed at the time of closing the browser.

Functionalities of Registered Users

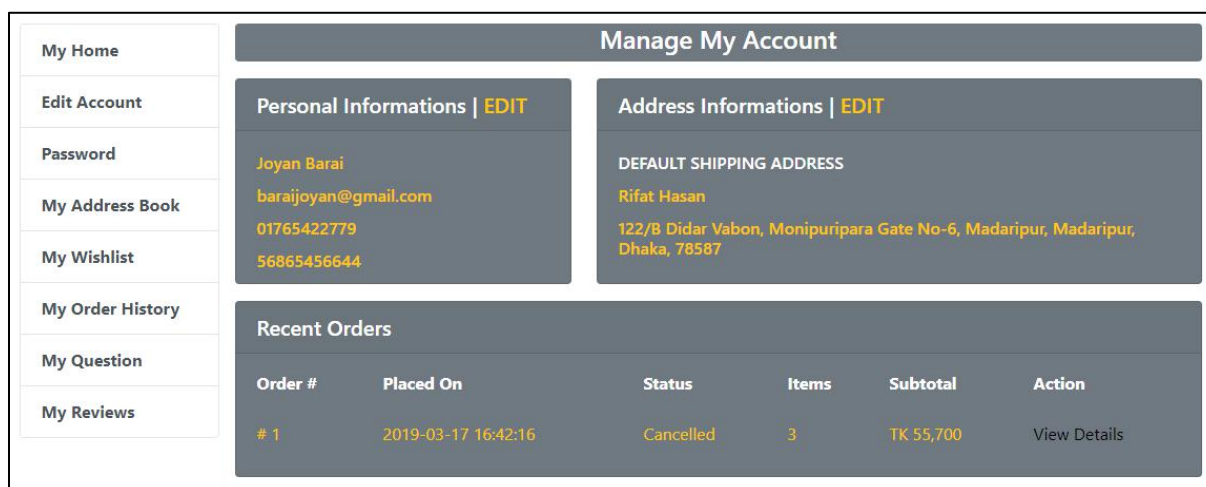

Registered users have all the capabilities as the guest users as well as some more features that they can use.

The image shows a login form titled "Login To Your Account". It features two input fields: "Email Address***" and "Password***", both with placeholder text and a small eye icon to toggle visibility. Below the password field is a checkbox labeled "Remember me". At the bottom is a large blue button labeled "Login".

Figure 12: Login To Account

The registered users can login to their accounts to get everything started. There are two fields needed to be fill-upped to login into an account. One is Email Address & another is Password. The input length of email address is maximum 30 and password is 5-15. If the login information are not matched with the database information, then an error message will be displayed.

The image shows a user home page layout. On the left is a sidebar with links: "My Home", "Edit Account", "Password", "My Address Book", "My Wishlist", "My Order History", "My Question", and "My Reviews". The main content area is titled "Manage My Account" and is divided into three sections:

- Personal Informations | EDIT**: Displays user details for Joyan Barai, including email (baraijoyan@gmail.com), phone (01765422779), and another phone (56865456644).
- Address Informations | EDIT**: Displays the default shipping address for Rifat Hasan, located at 122/B Didar Vabon, Monipuripara Gate No-6, Madaripur, Dhaka, 78587.
- Recent Orders**: A table showing the user's recent orders.

Order #	Placed On	Status	Items	Subtotal	Action
# 1	2019-03-17 16:42:16	Cancelled	3	TK 55,700	View Details

Figure 13: User Home Page

Every registered user will have a user home to manage their account. At the left section, they find a quick menu section. At the right section, they find some personal information about them and the recent order highlights. Personal information means name, email, phone, fax and default shipping address. The users find edit options to edit their personal information. Recent orders contain order id, order placed date, current status, number of items, order subtotal 'View Details' button to see the details of an order.

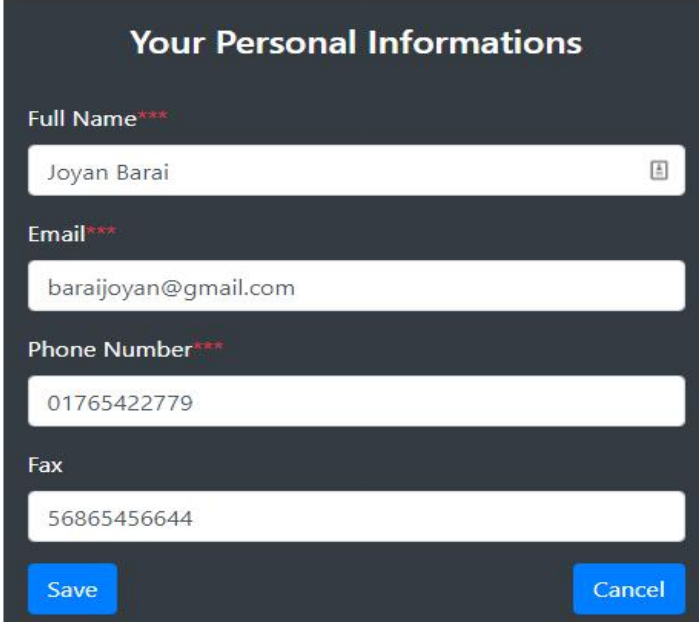

A screenshot of a web form titled "Your Personal Informations" in white text on a dark blue background. The form contains four input fields: "Full Name" with the value "Joyan Barai", "Email" with the value "baraijoyan@gmail.com", "Phone Number" with the value "01765422779", and "Fax" with the value "56865456644". Each field has a small red asterisk icon to its right. At the bottom of the form are two blue buttons: "Save" on the left and "Cancel" on the right.

Figure 14: View & Edit Account Information

They can view and edit their information. The edit section has four fields. Name, Email, Phone, Fax. Name, Email & Phone need to be filled up when the user edits the personal information. Fax is the optional one. The maximum length for the name field is 20 and for the email is 30. No need to add +88 or 0088 when a phone number is inputted. Just fill the 11 digits phone number. The length of fax is 9.

A screenshot of a web form titled "Change Your Password" in white text on a dark blue background. The form contains two input fields: "Password" and "Confirm Password". Each field has a small red asterisk icon to its right and a small eye icon on the right side of the input box. At the bottom of the form are two blue buttons: "Submit" on the left and "Cancel" on the right.

Figure 15: Change Password

User can also change their password for safety reason. There are two fields for in password changing section. One is Password and another is Confirm Password. Password and Confirm Password must match. The length of password is 5-15.

Address Book Entries		New Address

Figure 28: Add New Category

Admin can add new products by creating new category. Two steps are needed to be completed to create a new category. The first step has 3 fields. Parent Category, Child Category and Number of properties. Child category and number of properties are the mandatory fields. Parent Category is optional. If a parent Category doesn't exist, then the parent category will be created. A parent category can have multiple child, but a child cannot have multiple parents. The max value for Number of Properties is 30. Id, title, brand, model, warranty, price, pictures are the default properties for any category. The second step has dynamical fields. At the top left field is only readable field which contains the 'Parent Category' inputted in the first step. Next right field is also a readable field which contains the 'Child Category' inputted in the first step. The left side fields are used to input the properties name. The right-side fields are used to input dummy data. The radio buttons are the types of data which will be inputted for a property. The two checkboxes are 'Must Fillup' and 'Use as Filter'.

12			Cox's Bazar is a town on the southeast coast of Bangladesh. It's known for its very long, sandy beachfront, stretching from Sea Beach in the north to Kolatoli Beach in the south. Aggameda Khyang monastery is home to bronze statues and centuries-old Buddhist manuscripts. South of town, the tropical rainforest of Himchari National Park has waterfalls and many birds. North, sea turtles breed on nearby Sonadia Island. The modern Cox's Bazar derives its name from Captain Hiram Cox, an officer of the British East India Company. Cox was appointed Superintendent of Palongkee outpost after Warren Hastings became Governor of Bengal. He embarked upon the task of rehabilitation and settlement of the Arakanese refugees in the area. Captain Cox died in 1799 before he could finish his work. To commemorate his role in rehabilitation work, a market was established and named Cox's Bazar after him. Unlike many locations in the Indian Subcontinent where place names dating from the colonial period have been changed, Cox's name is still retained in the city he founded.

Figure 35: View Order Details

Admin can view order details. The order details contain the order id, order placed date time, shipping method, payment method as well as shipping address. All the ordered products are displayed with current images, quantity, unit price, total and subtotal.

3.4 Non-Functional Requirements

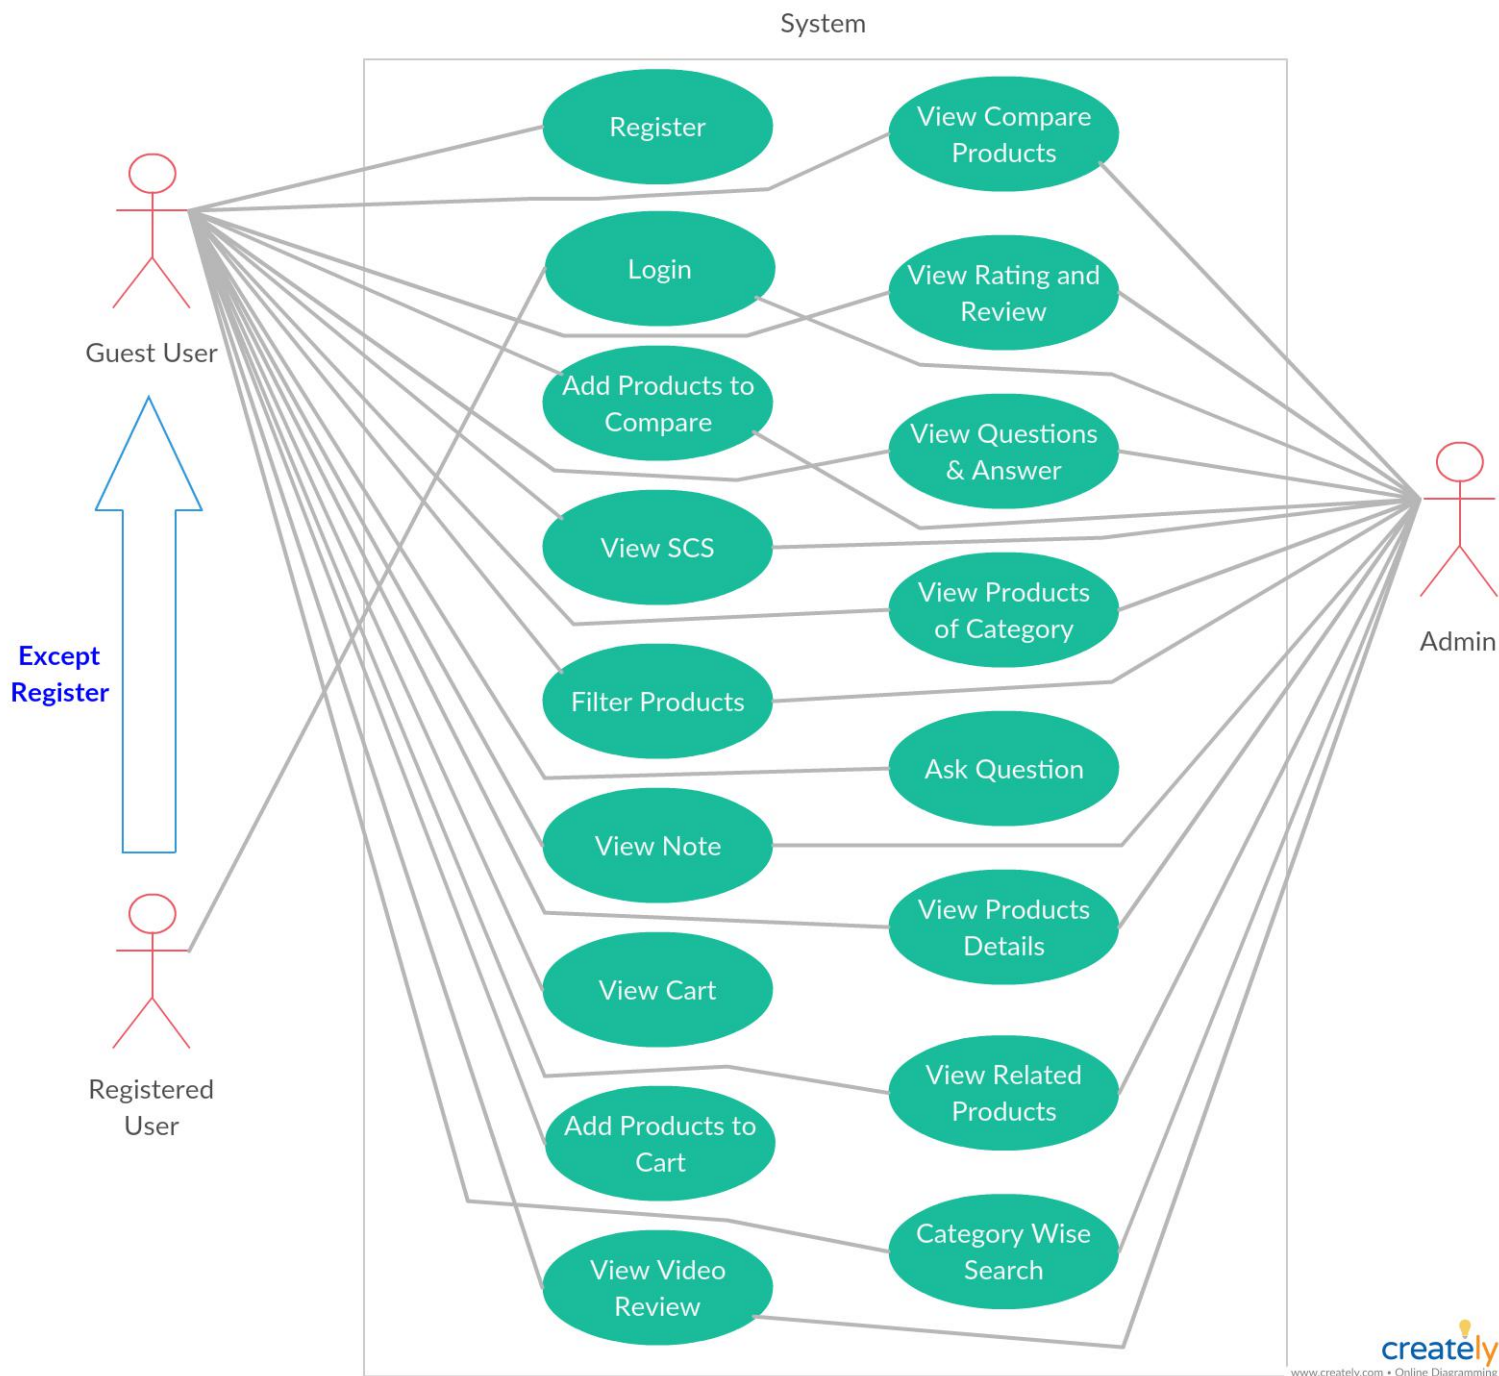

The system will accommodate high numbers of items and users without any error. Response to view information will take no longer than 5 seconds to appear on the screen. This system will not harm any users by any means. This system will use secure database system. Normal users can only edit only their own information. Users and admin have different login constraints. This system will handle expected and non-expected error in such a way that prevent loss in data and long downtime period.

Conclusion

The future of e-commerce will drastically progress over the years as the amount of internet users among businesses and consumers grows drastically every year. By the grace of almighty Allah, we have finished our project. We hope the project will serve its purpose. We thank to our honorable faculty M. Mahmudul Hasan for giving us the proper guideline. As all of the projects have some limitations, we have also some limitations. All of them, two limitations are the most severe. One is third party payment service, and another is ‘no hosting server’. But we will fill the limitations in future. We will also update our functionalities and processing speed in near future.
